

## Durham Region Health Department Facts about...

# Ethambutol

## Brand names

Etibi

## Reasons for taking this medicine

Ethambutol is an antibiotic, and it is used to treat **tuberculosis** (TB) with other TB drugs.

## How to take this medicine

- It is **very important** that you take ethambutol **exactly as ordered**
- If you think you might be **pregnant**, or you are **breastfeeding**, tell your doctor
- If you miss a dose, take it as soon as possible but **never** take two doses at one time
- Ethambutol can be taken **with or without food**
- **Do not drink alcohol** while taking ethambutol

## Caution

- Tell your doctor and pharmacist if you have any **drug allergies** before starting ethambutol
- Always tell your doctor and pharmacist if you are taking other medicines or vitamins
- Tell your doctor if you have ever had kidney disease, gout, or pre-existing optic neuritis, visual changes or any other eye disease, such as cataracts; or changes in seeing colours
- Do not store ethambutol in areas where there is direct sunlight, heat or moisture
- Keep all follow up appointments with your doctor in order to check your response to ethambutol
- Have your blood work done as ordered by your doctor to check your liver

## Caution - continued

Most people can take ethambutol without any problems. Ethambutol may have some side effects. Tell your doctor if you have:

- Loss of appetite
- Nausea and vomiting
- Stomach pain
- Metallic taste
- Swelling of face
- Fever, chills
- Headache, dizziness, confusion
- Joint pain, gout

**Stop** taking your ethambutol and call your doctor **right away** if you have the following symptoms:

- Blurred or changed vision
- Inability to see the colours red or green
- Eye pain
- “Spots” in your vision
- Signs of an allergic reaction: hives, difficulties breathing, swelling of face, lips, tongue or throat
