

As the demand for food donations increases, the Durham Region Health Department wants to make sure residents are donating acceptable food items. All food products must come from an inspected facility/source.

These are examples of unacceptable food items:

Private home-canned food

Food that has been served to the public

Partially consumed food, regardless of source

Unpasteurized juices & dairy products

Prepared household food/meals

Food/drink with alcohol, cannabis edibles or medical ingredients

Perishable food items for donation must be transported and stored cold, below 4°C, or hot, above 60°C. For more information, contact your public health inspector.
