

# Protect Your Digital Identity.

Your digital ID is protected by how well you manage and secure it. Learn how to protect yours using these tips.

## What is a digital ID?

It's a way to prove your identity online. It also protects your personal data by making sure that only the right people have access to it.

### Keep a clean machine.

Protect your devices against security flaws by keeping all software up to date.

### Monitor your credit reports.

Accounts you don't recognize could be a sign of identity theft.

### Create strong passwords.

Use long and unique passphrases for your accounts and multifactor authentication (MFA) where possible.

### Don't take the bait.

Never click on links unless you're sure their legitimate.

### Wi-Fi Danger.

Public Wi-Fi may not be secure. Avoid it for sensitive transactions.
